

## The first webinar in the series

### Understanding Mitochondrial Donation

Tuesday 19 July, 7:00pm (AEST)

Join Professor David Thorburn for a closer look at mitochondrial donation and other reproductive options designed to support conversations involving your patients' family planning. Prof Thorburn will briefly revisit mitochondrial disease genetics before discussing prenatal diagnosis, preimplantation genetic testing, donor conception and mitochondrial donation.

Register now for the opportunity to submit your clinical question. Join us live for an interactive discussion or receive the link to the recording after the event.

## Future sessions

The webinar series is comprised of the following:

- **Identifying Mitochondrial Disease: Case Studies** - September 2022
- **Diagnosing Mitochondrial Disease: Testing and Referral Pathways** - November 2022
- **Managing Mitochondrial Disease: The Australian Patient Care Standards** - early 2023
- **Emerging Therapies for Mitochondrial Disease** - early 2023

Please register in advance to be reminded closer to the time. [Register for an upcoming webinar](#)

On average, 10 out of every 2,000 patients seen at a general practice have mitochondrial DNA mutations, which may lead to mitochondrial disease or disease involving mitochondrial dysfunction.

Let us help you provide them with evidence-based care and resources. [Visit our Maybe It's Mito GP education page.](#)
