

Secure messaging

As healthcare becomes increasingly digitised, providers and patients alike are demanding better security of data and personal information. Reliable, secure provider-to-provider communication is key. This requires a commitment to secure messaging – safe, streamlined, and confidential information sharing across all healthcare providers and consumers.

Benefits for providers:

- secure exchange of clinical information and documents
- reduced use of paper and decreased need for scanning, printing, filing
- less time chasing clinical information or referrals
- patient confidence in confidentiality
- send/receive receipts
- faster access to information.

NQPHN acknowledges the Aboriginal and Torres Strait Islander peoples as Australia's First Nation Peoples and the Traditional Custodians of this land. We respect their continued connection to land and sea, country, kin, and community. We also pay our respect to their Elders past, present, and emerging as the custodians of knowledge and lore.
